Spooky new ServSwitch

Extreme KVM switching with the new ServSwitch Junior LP - Shockingly small but with so much capacity it's scary

The newest addition to desktop KVM switching has arrived! Perfect for workgroups and small offices, the ServSwitch Junior LP is easy to install and is so small it won't take up much space on your desktop.

The ServSwitch Junior JP offers outstanding performance for switching between two PS/2 PCs, supporting high resolutions up to 1920 x 1440 @ 75Hz. It also supports audio, even a loud speaker could be connected without any difficulties. This ServSwitch is simple to install and very easy to use.

No need to worry about which cables you require either because the ServSwitch Junior LP is delivered with two 4-in-1 5 ft Cables 5ft to connect your CPUs to the Switch. No bulky power supply is needed as the Switch receives its power via the CPUs keyboard interface.
