

ServSwitch 4Site Flex 4.11h Release Notes (Nov. 21st, 2016)

This version contains 1 new feature, 3 general improvements and 2 bug fixes.

Display of Channel Names in All Modes

The display of channel names can be controlled in the OSD window COMPUTER => "NAME 1-4". If enabled it is active in all modes.

The display of channel names can be switched permanently or for durations from 1 to 60 seconds.

The display of channel names is activated by switching the active channel or the mode. Switching to a mode or channel that is already active activates the display of channel names again. In Addition, the active channel is temporarily marked by a border in Quad and in Win mode. The color and width of the border is set in SYSTEM / BORDER (its name has been SYSTEM / WIN MODE before).

Channel names are not displayed in presentation mode.

The factory settings have the display of channel names enabled for 10 seconds.

The OSD window SYSTEM => QUAD has been replaced by the new settings explained above.

Compatibility with Touchscreen ekiosk Design Phex

Now the touch screen ekiosk Design Phex is supported (controller vendor id h222a, product id 1).

Input Resolution HDTV 1792x1280p60

Now the video resolutionen 1792x1280p60 is accepted at the input.

Computer USB Interface HID Mode

The 'Interface USB' factory setting in OSD COMPUTER / MOUSE/TOUCHSCREEN has been changed to Rel+Abs+Touch. This is compatible with Windows 7 or later. In case a touch screen is used with Windows XP, you will have to switch to Rel+Abs.

Security Levels

Fix: Security levels greater 6 did not display the video output on the screen.

Temporary Full Mode if Touched in Quad Mode

Fix: Temporarily switching to Full mode if a channel is touched in Quad mode did not work for certain touch screens.
