Installing the Elite Series Sliding Server Shelf (RM400)

What's Included

- (4) Mounting brackets
- (1) Shelf assembly
- (8) #10-32 screws
- (12) Wing nuts

Installation

- 1) Remove the shelf tray from the assembly by holding the cable support bar and pulling the shelf out. There is a slide release tab on each slide. Push the tabs in and pull the shelf tray off the rest of the assembly.
- 2) Mount the server fins on the shelf tray. The studs on the bottom of the fins should be placed in the long slots on the top of the shelf tray and then wing nuts are used to secure them underneath the shelf tray. Four fins can be used if there are two servers or just two fins can be used if there is one large server.
- 3) Mount the remaining part of the shelf assembly to the mounting rails (at the desired height) using two 10-32 screws per bracket. Do not tighten the screws.
- 4) Slide the shelf tray back onto the mounted portion of the assembly so that the slide locks together. Tighten the screws on the mounting brackets once the shelf tray is secured back on the assembly.
- 5) Attach the cable bridges to the rear slot on the shelf tray using two wing nuts and two lock washers per bridge.
