

# FM Hands-Free Kit

To help you properly use the hands-free kit, please follow this simple setup procedure.

## Making a Call

1. Turn on the ignition of your car.
2. Plug one end of the kit into the bottom of your phone (make sure your phone is on).
3. Turn on your radio and manually set it to FM 88.7 frequency (we recommend that you permanently set this frequency to one of your preset stations for future use).
4. Turn the volume to your desired level (it is normal to hear static at this point).
5. Plug the other end of the kit into the cigarette lighter socket.
6. Make sure that the indicator switch on the left side of the kit is up toward the direction of the car panel (you will notice that the background static is instantly muted after you do that).
7. Place the cellular phone down on a holder if applicable, or somewhere safe.
8. You are now ready to place a call.
9. Dial the desired phone number as you normally would.
10. Begin talking when the other side picks up (the conversation should be loud and clear through the FM radio).
11. In some areas, you will experience bad reception; don't worry, you can still use the kit by turning the indicator switch down. This will activate the built-in speakers for normal hands-free function. Make sure that you turn off the radio for best performance.
12. After the conversation, hang up as usual. You can go back to your favorite FM radio station or CD.
