# R4 ServSwitch™ Rackmount Kits
for Slimline and Full-Size Models

You can use your R4 ServSwitch Rackmount Kit to mount an -R4 version ServSwitch™ or ServSwitch™ Ultra (our SW720 [-R4] series, KV3000 [-R2] series, and KV5000 [-R2] series product codes) in a 19", 23", or 24" rack. The RMKxxB kits are intended for 4- and 8-port units with the "slimline" chassis (KVxx0xSA[E]-R2, SW722A[E]-R4). The RMKxxC kits are intended for 8-, 12-, and 16-port units with the "full-size" chassis (SW723A[E]-R4, SW724A[E]-R4, SW725A[E]-R4, and KVxxxxFA[E]-R2).

Each of these Kits consists of two rackmounting "ears" and four screws. To use a Kit to mount a ServSwitch or ServSwitch Ultra, take these steps, referring to the illustration below:

1. Match up the two holes in the "Switch end" of each Kit ear with the two empty screwholes on the side of the Switch, then fasten the ear to the Switch with two of the screws included with the Kit.

2. Once you've attached both ears, match the holes in the "rack end" of each ear to an appropriate set of matching holes on your equipment rack, then screw the Switch assembly to the rack using your own screws, bolts, or cage nuts (not included).
