

ServSwitch™ Wizard Pro Rackmount Kit

You can use your ServSwitch™ Wizard Pro Rackmount Kit to mount a ServSwitch Wizard Pro (our product code SW644A or SW648A) in a 19" rack. Each of these Kits consists of two rackmounting brackets and four screws. To use a Kit to mount a ServSwitch Wizard Pro, take these steps:

1. Refer to the illustrations below to determine how you want to mount the Switch. If your rack is deep enough, we recommend the normal installation shown on the left, which allows the front of the Switch to be flush with the front of the rack. If your rack is too shallow for that, however, you can reverse the brackets and install the Switch so that it protrudes from the front of the rack, as shown on the right.
2. Match up the two holes in the "Switch end" of each Kit bracket with the two empty screwholes on the side of the Switch, then fasten the bracket to the Switch with two of the screws included with the Kit.
3. Once you've attached both brackets, match the holes in the "rack end" of each bracket to an appropriate set of matching holes on your equipment rack, then screw the Switch assembly to the rack using your own screws, bolts, or cage nuts (not included).
