

Rackmount Kit for ServSwitch™ Brand

Use this Rackmount Kit to mount a single Hub of a ServSwitch™ Brand CAT5 Broadcast Video System (product code ACL8500A) in a 19" equipment rack.

To mount a Hub in a rack using this Kit, first decide which way you want the unit to face: The Hub can be mounted with either the front or rear panel facing forward. (For most people, it's most convenient to have the RJ-45 sockets facing forward, but your application might call for them to face the rear of the rack.)

Now take these steps, referring to Figure 1 on the back of this page:

1. Unscrew the two side screws on the end of the Hub that you want to face forward.
2. Remove the bezel and loose faceplate (but keep the bezel in storage if you think you might ever want to use the Hub as a standalone unit again).
3. Put the exposed end of the Hub against the *back* of the Rackmount Kit bracket (the side of the bracket on which the top and bottom flanges are longer). Line up the Hub so that (a) the edges of its case are behind the edges of the mounting hole in the bracket, and (b) the two screwholes in the Hub where you removed the screws match up with the screwholes in the bracket beside the mounting hole.
4. Take the Hub's faceplate that you removed earlier, place it against the *front* of the bracket, and line up its screwholes with the screwholes in the bracket.
5. Insert and tighten the screws through the plate, through the bracket, and back into the Hub's case.
6. Secure the Kit bracket to the rack using your own screws, bolts, cage nuts, etc.
