

Overview

The Outdoor Cabinet is a lightweight, corrosion-resistant aluminum enclosure that provides long-lasting protection for housing electrical components in both indoor and extreme outdoor environments. However, there is no heating or cooling in the cabinet, so the minimum or maximum temperature that's allowed depends on the temperature limits for the equipment that you install in the cabinet. The cabinet is designed for rooftop or tower-mounted telecom applications. It's suitable for use in datacomm, industrial applications, petrochemical plants, sewage plants, marine environments, and similar installations.

Accessories

Available accessories include:

- The Mounting Panel (RMN401) provides a mounting surface in the enclosure's back for surface-mount components. It's constructed of aluminum and has a mil finish.
- The Rack Angles (RMN402) allow for mounting 19" rack equipment in 23.6" (59.9 cm) wide enclosures. It's made of zinc-plated, 14-gauge steel with 0.281" (0.7-cm) holes. Hardware is included for mounting equipment to the rack angles. The package includes (2) rack angles, (20) screws, and (20) clip nuts.
- The Padlocking Handle (RMN403) that's illustrated on the cover of this manual adds security. The kit includes the handle and mounting hardware.
- The Pole Mounting kit (RMN404) is used to secure the cabinet to an upright pole.
- The Solar Shield Top (RMN405) is used to deflect direct sunlight to reduce heat buildup.
